PB ESI · IESF WEC 2026

Timnas Performance Hub Progress report V1.21 – V1.24

What was built on 13–14 November 2026: better competitor analysis, scrim reports, Today page, Bahasa Indonesia as the default language, and new help for coaches and analysts.

4
releases (V1.21 live; V1.22–V1.24 ready)

224
automated tests passing, 0 failing

0
database changes needed

31
days to WEC (15–20 Dec, ICE BSD City)

Prepared 14 November 2026 by Claude (Claude Code) for the Timnas staff. Continues *Timnas_Hub_Progress_V1-V1.20.pdf*. Release notes in the project: `docs/HUB_V1_21.md` to `docs/HUB_V1_24.md`.

1. At a glance

Release	Focus	Status	Checks
V1.21	Improving existing features in five rounds: competitor results, live WEC rosters, scrim reports, Bahasa Indonesia by default, Competitors tab and Today page.	**LIVE** since 13 Nov commit 2b3b901 on main	GitHub CI green (incl. database tests); Vercel deployed
V1.22	Bahasa Indonesia sweep: the screens that still showed English.	**READY** not deployed	Local tests pass
V1.23	Keeping features current: editable public results, a quieter Today list, a Guide that matches the buttons.	**READY** not deployed	Local tests pass
V1.24	Help for coaches and analysts: game breakdowns, VOD review themes, sparring partner plan, end-of-day summary; benchmark feasibility.	**READY** not deployed	Local tests pass

All four releases change the website only. Going live with V1.22–V1.24 is one push to `main`; Vercel then deploys it and GitHub CI re-runs every test, including the database ones.

2. V1.21 — improving existing features LIVE

Round 1 · Competitor analysis: recent results on record

- Every title's Competitors tab (MLBB, MLBB Women, Dota 2, PUBG Mobile, eFootball) opens with rivals' published national-team results: WEC24 and WEC25 podiums, Asian Games 2026, SEA Games 2025, FIFAe World Cup 25.
- The same results appear in the nation profile and on the opponent card (also in its download). They are kept apart from staff scouting, so scouting coverage is unchanged.
- Lines read from a summary are marked *to confirm*; club results are marked *club*.

Title	Key findings for the coaches
MLBB	Malaysia won WEC24 and WEC25 (3–0 over Cambodia). Türkiye beat Indonesia for WEC25 bronze. Myanmar won Asian Games 2026 gold, 4–0 over Indonesia.
MLBB Women	Egypt took bronze at both WEC24 and WEC25. Türkiye lost 0–2 to Indonesia in the WEC25 groups.
Dota 2	Greece is the defending WEC champion (WEC24, 2–0 over Sweden; no WEC25 Dota event).
PUBG Mobile	Türkiye won WEC24 (Brazil bronze). Two players of S2G, the 2026 PUBG Mobile World Cup winners, are in Türkiye's WEC four.
eFootball	Iran won Asian Games 2026 gold over Malaysia. Poland (console) and Thailand (mobile) won the FIFAe World Cup 25.

Round 2 · Rival gaps filled; WEC rosters re-read

- Every MLBB, MLBB Women, Dota 2 and PUBG Mobile rival roster was re-read from wec.iesf.org and compared with the 3 November copy.
- Changes show as a dated **roster changed** check (who joined, who left, coach), keeping the history:
  - **Myanmar MLBB**: all five players and the coach replaced.
  - **Türkiye MLBB**: all five players and the coach replaced.
  - **Cambodia MLBB**: three new players.
  - **Colombia PUBG Mobile**: new coach.
- More public results were added for Dota 2 and PUBG Mobile rivals.

Round 3 · Scrim report polish

- **CSV export:** notes starting with = + - @ can no longer run as spreadsheet formulas, and names like "Türkiye" display correctly in Excel.
- **Correction dates** use the team's day (WIB), not UTC.
- **PUBG Mobile:** match wins can no longer be more than matches played.
- **Save report:** a double tap no longer files the same report twice.

Round 4 · Bahasa Indonesia by default; Competitors tab

- **Language:** the hub and the sign-in screens now open in Bahasa Indonesia. English stays available, and the choice is remembered on each device.
- **Competitors tab:** a *Last change* column, a *roster changed* tag, sorting by threat tier or latest change, and *Use as note*, which pre-fills a scouting note from a public result.
- **Today:** a new panel of rival roster changes in the last 14 days.

Round 5 · Today page

- Today opens with **Needs attention now**: one list ranked *now* (late), *today*, *this week*, with a count, the titles involved and a button to the screen that fixes it.
- It covers results not logged, decisions due, proposals to review, titles without reports, attendance, wellbeing flags, rival roster changes and weekly roster checks.

> Before V1.21 went live, the full test suite was run for the first time on this PC. It caught a mistake made during round 4, which would have broken several screens, before anything reached the live site. All 216 tests then passed, and GitHub CI passed after the push to `main`.

3. V1.22 — Bahasa Indonesia sweep READY

With Indonesian as the default, every screen was opened in Bahasa Indonesia for three staff profiles (78 views) and any text still in English was listed: 316 strings, many of them data rather than interface text.

- About 85 interface texts were translated: Trends, Weaknesses, Patterns, Pelatnas (schedule, attendance, availability), main dashboard, practice quality, preparation packs, the PUBG Mobile screenshot section, Draft Room, scouting coverage and readiness.
- All scrim report error messages are now in Indonesian (they used to stay in English).
- Kept as written on purpose: rival results and research notes, Dota match analysis, source names, and player and hero names.

4. V1.23 — keeping existing features current READY

Change	What it means for the staff
Public results, editable in the hub	Analysts add, correct or retire a public result in each Competitors tab, with a source; staff lines show who entered them. Before, every update needed a developer. Results never count as scouting notes.
A quieter Today list	About 50 roster checks were showing as due at once. The 32 rosters confirmed unchanged on 13 Nov now have a dated check, and the rest are grouped per title (for example "CS2: 11").
Guide matches the buttons	The Indonesian Guide quoted English button names that the screen no longer shows. It now uses the same Indonesian names as the buttons, and 15 more buttons were translated.
Steadier tests	Website tests for the AI features failed on a slower machine because they waited a fixed time; they now wait until the buttons appear.

5. V1.24 — help for coaches and analysts READY

All four are computed from the hub's own records: confirmed games, scrim reports, weakness labels, the partner bank and sessions. They add no new AI cost, need no database change, and predict nothing. Every line says what it is compared with.

Feature	Where	What it does
Game breakdowns	Patterns tab MLBB, MLBB Women, Dota 2	A first draft per confirmed game: the draft, the game time, and each player against *their own* usual level (median of 3+ earlier games; 30% or more away is flagged as better or worse). The analyst edits it and adds it to the scrim report.
VOD review of our own games	Weaknesses tab all titles	Analysts mark moments in our videos (time, player, label, one line). A label that comes back for the same player 3+ times across 2+ games in 28 days becomes a *recurring theme*, with links to each moment. One tap turns it into a coaching proposal.

Feature	Where	What it does
Sparring partner plan	Scrims & practice all titles	The record against each partner and which weaknesses showed up against them. Up to five suggestions, each with its reason: re-test a weakness against the partner where it showed up; book a stand-in for rated rivals; keep enough Tier 1 sessions; keep Tier 1 contacts warm.
End of day	Today page	Today's reports, results, sessions not logged, "Did we fix it?" answers and what failed, plus up to three priorities for tomorrow. One button copies a message for the staff WhatsApp group.

Benchmarks against international level — feasibility

Title	Verdict	Why
Dota 2	**Feasible**	Public professional match data (OpenDota) has per-position numbers; the hub already reads OpenDota.
PUBG Mobile	**Partly**	Team standings and points are public; per-player numbers are not consistent.
MLBB / MLBB Women	**Not reliable yet**	No public per-player statistics feed; possible only as a hand-entered table per tournament, with its source.

Recommended order: Dota 2 first, then PUBG Mobile at team level.

6. Quality and how it was checked

Check	Result
Automated tests (`npm test`)	**224 passed, 0 failed**; 35 database tests skipped locally (no Postgres) and run by GitHub CI
Coach Donny's athlete readiness suite	**105 passed**
Typecheck and builds	Pass: hub (`dist/hub.html`) and website
V1.21 in production	GitHub CI green, database tests included; Vercel deployment completed

New tests were added for every change: public results and their editing, roster checks, CSV safety, PUBG Mobile validation, the Today list, the default language and translations, game breakdowns, VOD themes, the partner plan and the end-of-day summary.

> **Rules the hub keeps:** staff approve anything the AI writes; nothing is scored or predicted; small samples are labelled instead of being turned into conclusions; player notes are performance only (phone numbers refused); wellbeing stays with Coach Donny and the agreed roles.

7. Open points and next steps

1. **Deploy V1.22–V1.24.** No database change: one push to `main`, then a check that GitHub CI and Vercel are green.
2. **Confirm the "to confirm" results.** An analyst opens their sources (mostly Liquipedia, which blocks automated reading) and corrects or retires them in the hub.
3. **Sources disagree on the Esports Nations Cup** (November 2026 vs postponed to 2027); the affected lines say so.
4. **Re-check the CS2 rosters.** They were last read on 3 November.
5. **Practice standard.** Proposed next work: a written PB ESI practice standard checked per session, session plans with time-boxed drills, automatic "did the drill work?" verdicts, and Dota 2 benchmarks.
